

6. Product types

Calibration curves are available for the following products:

Product type	Paper type	Grammage [g/m ²]
*Reference	! Only used for testing the moisture meter !	
Fluting		80 - 160 g/m ²
Coated paper		90 - 300 g/m ²
Copy paper		60 - 200 g/m ²
Kraftliner		100 - 400 g/m ²
Board		300 - 400 g/m ²
Testliner brown		90 - 210 g/m ²
Testliner white		90 - 210 g/m ²

6.1 Selecting the product type

Due to the wide range of different types of papers in use, there are no default product type categories. For the different product types of the PMSA, the grammage of the paper sheet and the paper type are decisive.

The product type overview contains suggestions for different paper types and their associated grammage [g/m²].

To achieve an accurate measuring result, it is necessary to create a specific calibration curve.

The recording of a new calibration curve can be carried out by Schaller Messtechnik GmbH or by the customer (see [8.3 Paper Type Recording](#)).
