

Here's how to improve water flow and remove limescale, Rust and Legionella from pipes: Daxtro DR is the solution

• Engineer Jaime Agramont achieves in many Ticino buildings show positive results and expands the sales network in Switzerland and abroad, thereby creating jobs in Ticino be created.

The product is called Daxtro DR and is a revolutionary device that, when connected to the Drinking water supply systems for buildings of all types with is installed to address limescale and/or rust problems is able to remove the deposits already after to eliminate within a few days without Chemicals are used and without

that changes to the infrastructure need to be made.

The application only takes a few minutes and The result is guaranteed!

The engineer Jaime Agramont is Bolivian origin and has lived in the area for about ten years Ticino, where he and his wife, also from Ticino, live origin, founded their family.

Jaime developed and built the device with the Support for several individuals and

Organizations that believed in his idea, as the product addresses real problems.

A fraction of the costs are solved. Agramont will do that. office and production from his home in Canobbio, into a warehouse in the coastal town relocate and occupy part of it. The goal is it, several people in Ticino and in the To offer jobs in Switzerland.

The creation of the company headquarters

This is a very important milestone, which Agramont announces with thanks to all who made this possible. Project throughout the entire concept phase have supported. In particular the engineer Paolo Croce and the management consultant Fabio Frigo-Mosca and the Regionale Bellinzona and Valleys Development Agency (the Main funders) have a fundamental role played and follow the developments of Companies with enthusiasm and interest.

The project was also supported by the Agire Foundation and supported by the Inno Park Ticino Center. The developed product also eliminates algae and Legionella. The problem of deposits affects many houses, buildings, industrial areas, Agricultural, sports, beach and school facilities in Ticino.

and sanitary facilities. After initial, fundamental Very positive tests were conducted in approximately one hundred countries in 2016. Facilities (including kindergartens in Locarno) Various devices were installed (to protect against rust and, in the PCI shelter in Stabio, against limescale).

"The results achieved confirm the

The product's effectiveness is a plus. It is maintenance-free and easy to remove when moving house. and transport. In the first months of the

The company will offer each potential customer a Individual advice and support are offered; this aspect, in addition to the desire to

to create jobs for the residents, also part of the company philosophy.

"The product improves the quality of the water distribution circuit significantly," explains he continued.

with great passion and motivation, Agramont, In fact, we often deal with the The water quality is good, but there's too little connection to the... quality of the pipes we use to transport these precious liquid, the basis of life, use.

By removing rust and limescale

"It improves the water flow and the Circulation in radiators and heating coils significantly; moreover, it prolongs the Lifespan of household appliances such as Washing machines, dishwashers, irons and coffee machines. Also limescale deposits. on bathroom surfaces such as tiles, sinks, shower cubicles, etc.

significantly reduced." This has numerous advantages in Regarding energy consumption and the Finances, since the use of

Special chemical cleaning agents or

Special filters. "All this ultimately leads to an undeniable extension of up to 5 years."

Benefits for the environment and our health and only increases the device's power consumption minimal, namely by about 20 francs per year.

Last but not least, this also affects algae in

Swimming pools and the dreaded Legionella bacteria eliminated, a danger to humans Bacterium that grows in water distribution systems can develop in which the temperature is not at least 60 degrees Celsius.

The problem has even worsened in recent years.

Switzerland is experiencing increased restrictions due to the introduction of new, state-of-the-art technology.

Systems (heat pumps and photovoltaic systems)

They are set to lower temperatures than older electric radiators or oil burners. This

The National Reference Centre for Legionella at the cantonal hospital office, "the validity "Our product has been confirmed," Agramont explains.

The costs range from at least around 900 francs for a detached house or a Apartment up to several thousand francs for larger buildings. These costs will refunded if the application is rejected.

To assure customers of the reliability of the To convince you of the product, we also offer

a 2-year warranty, which can be extended to up to [amount] upon request

The future? "One of our representatives has started work in Bern and intends to..."

to also become active beyond the Alps.

We also have some industrial plants in South America installed; a very important one for us Interesting market. We want to reach people.

Resources like our water should be treated with care and Care must be taken when transporting. All too often The excellent water from our Mountains through pipes in a terrible Condition transported."
